## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4, 9-14, 20, 46-48, 51-55 of U.S. Patent No. 6,496,572. Although the conflicting claims are not identical, they are not patentably distinct from each other because they differ only in minor changes in wording. For instance, claim 1 of the present invention is essentially the same as claim 14 of the patent except it does not specify the received signal as being a sampled signal. However, since the received signal being correlated with the phase shifted version thereof must be "sampled" in order to perform the evaluation as to whether or not it is a call waiting signal, the received signal can be considered as a "sampled signal."

### *Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Szeliga, Cohn et al., Lin, and Dittakavi et al. show other modems with call waiting

detection. Brahms et al., Levens et al., and Hubert et al. show the use of phase shifting in tone detectors.
